GET STARTED

If the BTC price is \$10,000 right now, you will need to predict whether the price of BTC will rise or fall.

PREDICT RISE

PREDICT FALL

BUY LOW, SELL HIGH

You can choose to buy/long the Perpetual Contract at the price of \$10,000 and make profit when the BTC price rises over \$10,000.

BUY NOW A.k.A Buy/Long

ENTER THE BUYING AMOUNT AND PRICE

Buy 10,000 Contracts at the price of \$10,000/BTC. The order value is 1BTC and it only costs 0.01 BTC

Qty	10000 Cont	BUY / LONG
Price	10000 USD	BUT / LONG

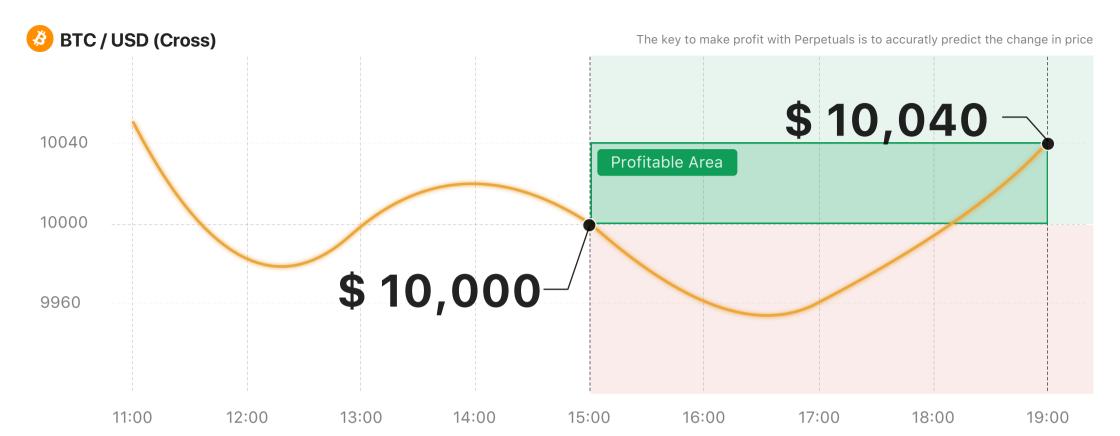

Price falls to \$9,660 two hours after the position was made.

LOSS OF 0.004016 BTC

Calculation Formula: 10000 * (1/10000 - 1/9960) = -0.004016 BTC

But if you still believe the price of the BTC will rise soon...

KEEP THE POSITION

2 hours later... BTC Price Rises to \$10,040

0.003984 BTC PROFIT WAS MADE

Calculation Formula: 10000 * (1 / 10000 - 1 / 10040) = 0.003984 BTC

Decide to sell out now to collect your profits

SELL OUT NOW AND CLOSE THE POSITION

Enter the Sell Out Amount and Price

Sell 10,000 Contracts at the price of \$10,040/BTC. The order value is 1 BTC and it only costs 0.01 BTC

Qty	10000 Cont	CELL / CHODT
Price	10040 USD	SELL / SHORT

CONGRATS!

Generated profit

0.003984 BTC

The Profitability

39.84%

Sit on the Iron Throne with your 100X leverage!

Generated profit ≈ 0.003984

Calculation Formula: $10000 * (1 / 10000 - 1 / 10,040) \approx 0.003984$ BTC

Realized PNL (Long) = Contracts * Multiplier * (1 / Entry Price – 1 / Exit Price)

How to close a position?

Users can place a inverse position order to close a position on BitForex Perpetual Contract trading. If your inverse position order amount is greater than your current position, the amount left will be placed as a new order.
